# **DETAILED ACTION**

# Information Disclosure Statement

1. The information disclosure statements (IDS) filed Oct. 21, 2004 and Aug. 12, 2005 are is acknowledged.

#### **Drawings**

The drawings are objected to because: In Fig.1, the same-direction circular-polarization 2. lights r3 and r8 have opposite-direction circular polarizations (r4 and r9, respectively) after transmitting through the same retardation layer b1. It appears to the examiner that all the same direction circular polarization lights transmit through the same retardation layer should have the same-direction circular polarization regardless the incident angles and the material of the retardation layer. The retardation layer affects the different time durations of transmission of the transmitted light with different incident angles. If the retardation layer affects to change the direction of the circular polarization transmitted light, it should affect to change all the transmitted lights regardless the incident angles. Similarly, in Fig.4, the same-direction circularpolarization lights r17 and r24 have opposite-direction circular polarizations (r18 and r25 respectively) after transmitting through the same retardation layer b1. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and

Art Unit: 2873

appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

# Claim Objections

3. Claims 6-16 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend from another multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims 6-16 have not been further treated on the merits.

# Claim Rejections - 35 USC § 103

# Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Parker et al (6,752,505) in view of Blanchard (2002/016811).

Parker et al discloses in Fig.1, a light condensing system comprising a backlight system including a light source and a microprism sheet array 2 capable of condensing emitted light from the light source within ±60° of the front direction. Blanchard disclose a backlight system including

Art Unit: 2873

brightness enhancing (pre-polarization) films 38,40,42 with no pattern structure for enhancing

the brightness of a LCD. Therefore it would have been motivated to those skilled in the art to

modify the Parker et al's light condensing system in taken consideration of Banchard's teachings

by forming a brightness enhancing film as a second light condensing element as taught by

Blanchard. Such a modification would not change the scope of the invention in the Parker et al

reference.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Huy Mai whose telephone number is (571) 272-2334. The examiner can normally be reached on M-F (8:00 a.m.-4:30 p.m.).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ricky L. Mack can be reached on (571) 272-2333. The fax phone number for the organization where this application or proceeding is assigned is (571) 273-8300.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (571) 272-1562.
